

Environmental Policy of Carpentier Hardwood Solutions.

Introduction

At Carpentier Hardwood Solutions, we recognize the critical role we play in managing our natural resources and minimizing our environmental footprint.

We understand that sustainable timber management and environmental protection are essential to preserve biodiversity and combat climate change.

This environmental policy illustrates our determination to act responsibly and reduce our impact on the environment.

Energy efficiency, energy efficiency is important.

Priority is given to sustainable wood management and waste minimization which is the biggest challenge.

We are currently working on it on an ongoing basis mainly in the final manufacturing process.

Objectives

Sustainable Wood Management:

We are committed to using wood from sustainably managed forests and seek certifications such as FSC and PEFC (Forest Stewardship Council) to ensure the origin of our wood and to combat deforestation.

Energy efficiency:

We work to reduce our energy consumption by using modern and efficient production technologies and switching to renewable energy sources whenever possible.

Waste Minimization and Recycling:

We strive to minimize waste production through efficient production processes and promoting recycling and reuse of materials.

Air and Water Quality:

We strive to minimize the emission of pollutants into the air and the discharge of polluted water, and we comply with all relevant regulations in this area.

Implementation

To achieve these objectives, we will:

Make maximum efforts to carefully select wood sources and make maximum use of wood sourced from sustainably managed forests.

Invest in research and development to improve our production processes and increase efficiency.

Actively participate in environmental projects and partnerships aimed at nature conservation and environmental education.

Hazardous Substances Commitment:

We are dedicated to minimizing the use of hazardous substances in our processes and products, ensuring compliance with all relevant regulations and industry standards. We actively seek safer alternatives and adopt best practices to protect the health of our employees, customers, and the environment
